

clerie's Gentoo install Guide

Konzept

- Vollverschlüsselte Festplatte
- (U)EFI Boot direkt in den Kernel
- Hibernate

Partitionierung

/boot/efi		512MB	mkfs.fat -F 32
/boot		1G	mkfs.ext4
	/	25GB	
lvm	swap	RAM+2GB	
	/home	100%FREE	

Krypto

```
cryptsetup luksFormat -c aes-xts-plain64 -hash sha256 -s 256 /dev/nvme0n1p3
```

LVM

```
cryptsetup luksOpen /dev/nvme0n1p3 lvm
```

```
pvcreate /dev/mapper/lvm
```

```
vgcreate vg0 /dev/mapper/lvm
```

```
lvcreate -L50G -n root vg0
```

```
lvcreate -L18G -n swap vg0
```

```
lvcreate -l 100%FREE -n home vg0
```

```
mkfs.ext4 /dev/mapper/vg0-root
```

```
mkswap /dev/mapper/vg0-swap swapon /dev/mapper/vg0-swap
```

```
mkfs.ext4 /dev/mapper/vg0-home
```

Kernel Konfig

- Wir wollen direkt vom Kernel booten

- https://wiki.gentoo.org/wiki/EFI_System_Partition
