

HP Proliant Gen 8 ILO Virtual Serial Port with Proxmox

Add these options to `/etc/default/grub` in Proxmox to provide a TTY to the virtual serial port of ILO of an HP Proliant Gen 8. The graphical terminal can still be used in the web view and via cable.

```
GRUB_CMDLINE_LINUX_DEFAULT="console=ttyS1,9600n8 console=tty0"  
GRUB_TERMINAL_INPUT="console serial"  
GRUB_TERMINAL_OUTPUT="gfxterm serial"  
GRUB_SERIAL_COMMAND="serial --unit=1 --speed=9600 --word=8 --parity=no --  
stop=1"
```
