

Wireguard

wg conf

/etc/wireguard/<interface name

```
.conf>
# Lokales Interface
[Interface]
Address = 192.168.123.1/24
PrivateKey = <private key of local interface>
ListenPort = 51820 # Netzwerport
PostUp = <bash command>
PostDown = <bash command>

# Client 1
[Peer]
PublicKey = <public key of client 1>
AllowedIPs = 192.168.123.12/32

# Client 2
[Peer]
PublicKey = <public key of client 2>
AllowedIPs = 192.168.123.11/32
```

Wireguard verwenden

Interface starten

```
wg-quick up <interface name>
```

Interface stoppen

```
wg-quick down <interface name>
```

Interface starten systemd

```
systemctl start wg-quick@<interface name>
```

Interface stoppen systemd

```
systemctl stop wg-quick@<interface name>
```

Interface persistent starten systemd

```
systemctl enable wg-quick@<interface name>
```
